## PRO HARMONY* PLANNING INFORMATION

Professional Ranges

## Model Options

There are three sizes of Thermador Pro Harmony Ranges to choose from -48 -inch, 36 -inch and 30 -inch. Models are available in your choice of all-gas or dual-fuel configurations. Pro Harmony Ranges feature a compact, 24 -inch deep design in stainless steel with a porcelain cooktop surface. Ranges are LP convertible by ordering the specified kit. Be sure to reference the correct model information in this design guide.
Installation Considerations
The information in this design guide provides key features, product dimensions, cutouts and installation specifications. Before installin a Thermador Pro Harmony Range, be sure to verify the cutout dimensions and electrical/gas connections. Installation instructions are with the product for complete details prior to the installation.

Installation Options
Thermador Pro Harmony ${ }^{\oplus}$ Ranges feature a bold, professional design and a compact, 24 -inch depth profile that creates a seamless look within standard cabinetry. These ranges can be installed in a wall or island installation.

Ventilation Requirements
We strongly recommend that a Thermador Professional ${ }^{\bullet}$ Wall or Island Hood or Custom Insert be installed with all Thermador Pro Harmony Ranges. Reference the selection guide in the ventilation section for compatible Thermador hoods. Downdraft ventilation should not be used. Do not install a microwave-hood combination above the cooktop, as these types of units do not provide the proper ventilation and are not suitable for use with Thermador Pro Harmony Ranges.

Important Ventilation Notes:
For wall installations, the hood width must, at a minimum, equal the nominal width of the appliance cooking surface. Where space permits, a hood larger in width than the cooking surface may be desirable for improved ventilation performance.

- For island installations, the hood width should, at a minimum, overhang the appliance cooking surface by 3 " on each side.
- Due to the high heat capability of these ranges, particular attention should be paid to the hood and duct work installation to assure it meets local building codes.
- For best smoke elimination, the lower edge of the hood should be installed 30 " -36 " above the appliance cooking surface. it must be 36 " or greater distance above the cooking surface.

Electrical and Gas Specifications
Be sure your appliance is properly installed and grounded by a qualified technician. Installation, electrical and gas connections, and grounding must comply with all applicable local codes.

Natural Gas or LP
Thermador Dual-Fuel Pro Harmony Ranges are shipped by the factory to operate on natural gas. They must be converted for use with propane. Verify that the type of gas being used at the installation site matches the type of gas used by the appliance. If the location / job site requires conversion from natural gas to propane ( $L P$ ), an $L P$ gas conversion kit must be purchased separately. Field conversion must be done by qualified service personnel only. Please refer to the LP Conversion Instructions packed with product for further information.
A manual gas shut-off valve must be installed external to the appliance, in a location accessible from the front, for the purpose of shutting of the unit.

Natural Gas Requirements:

- Inlet Connection: $3 / 4$ " NPT external, $1 / 2$ " NPT interna (Minimum 3/4" diam. flex line.)
Supply Pressure: 6" min. to 14" max. water column. ( 14.9 mb to 34.9 mb )
- Manifold Pressure: 5 " water column ( 12.5 mb )

Propane Gas Requirements:
Inlet Connection: 3/4" NPT external, 1/2" NPT internal (Minimum $3 / 4$ " diam. flex line.)

- Supply Pressure: 11 " min. to 14 " max. water column. ( 27.4 mb to 34.9 mb )
- Manifold Pressure: 10 " water column ( 24.9 mb )

## High Altitude:

High altitude kits are available for Thermador Pro Harmony Ranges. Reference the Accessory chart or Contact Customer Support for details.
Re

## PRO HARMONY ${ }^{*}$ PLANNING INFORMATION

Professional Ranges

Dual-Fuel:
Thermador Pro Harmony Dual-Fuel Ranges are dual rated, designed to be connected to either $240 / 208 \mathrm{VAC}, 60 \mathrm{~Hz}, 4$-wire, single-phase power supply. The connection may be made with a range supply cord kit (purchased separately) or by hard-wiring to the power supply. A dedicated circuit breaker is required.

| Model |  |
| :--- | :---: |
|  | Required Circuit Breaker |
| PRD486WLHU | $240 / 208 \mathrm{~V}$ AC 60 Hz |
| PRD486WDHU | 50 A |
| PRD484WCHU | 50 A |
| PRD364WLHU | 50 A |
| PRD364WDHU | 30 A |
| PRD366WHU | 30 A |
| PRD305WHU | 30 A |
| PRD304WHU | 30 A |

All-Gas:
Thermador Pro Harmony All-Gas Ranges are equipped with a 3 -wire plug and are designed to be connected to a $120 \mathrm{~V} \mathrm{AC}, 60 \mathrm{~Hz}$, single phase power supply. A dedicated circuit breaker is required.

Electrical Supply
IMPORTANT: The cord supplied with gas $\begin{gathered}\text { NEMA } 520 \\ \text { RECPPTACLE } \\ \text { PLUG }\end{gathered}$ ranges having an electric griddle requires a NEMA 5-20 receptacle as shown here Local codes my require a different wiring method.

WARNING: This appliance is equipped with a three-prong grounding plug for protection against shock hazard and should be plugged directly into a properly grounded receptacle. DO NOT cut or remove the grounding prong from this plug. DO NOT ALTER THIS PLUG.

## Electrical and Gas Locations

Typical placement of the electrical and gas supply can be found within the "Cutout and Range Dimensions" located on the installation pages. Alternate placement within the supply zone is acceptable. Dual-Fuel ranges may be connected to the power supply with a range supply cord kit (sold separately or by hard-wiring to the power supply. Ali-gas ranges may be cornected to the power supply wih he supplied range the proper wiring components (cord or condwi and wires) and complete the electrical connection as dictated by local codes and ordinances and or the National Eletric Code The wit mut be propely grouded

Installation of the range must be planned so that the rough-in of the junction box for the receptacle or conduit connection will allow maximum clearance to the rear of the unit.

## PRO GRAND ${ }^{*}$ PLANNING INFORMATION

Professional Ranges

## Model Options

There are three sizes of Thermador Pro Grand Ranges to choose from -60 -inch, 48 -inch and 36 -inch. Models are available in your choice of all-gas or dual-fuel configurations. All models are 27 -inches deep and available in stainless steel with a porcelain cooktop surface. Ranges are LP convertible by ordering the specified kit. Be sure to reference the correct model information in this design guide.
Installation Considerations
The information in this design guide provides key features, product dimensions, cutouts and installation specifications. Before installing a Thermador Pro Grand Range, be sure to verify the cutout dimensions and electrical / gas connections. Installation instructions are subject to change. Always consult with the installation manual included with the product for complete details prior to the installation

Installation Options
Thermador Pro Grand Ranges feature a bold, professional design and a commercial-depth of 27 -inches. These ranges can be installed in a wall or island installation.

Ventilation Requirements
We strongly recommend that a Thermador Professional ${ }^{\oplus}$ Wall or Island We strongly recommend that a Thermador Professional ${ }^{\circledR}$ Wall or Is
Hood or Custom Insert be installed with all Thermador Pro Grand Hood or Custom Insert be installed with all Thermador Pro Grand Ranges. Reference the selection guide in the ventilation section for
compatible Thermador hoods. Downdraft ventilation should not be used. Do not install a microwave-hood combination above the cooktop, as these types of units do not provide the proper ventilation and are not suitable for use with Thermador Pro Grand Ranges.

Important Ventilation Notes:

- For wall installations, the hood width must, at a minimum, equal the nominal width of the appliance cooking surface. Where space permits, a hood larger in width than the cooking surface may be desirable for improved ventilation performance.
- For island installations, the hood width should, at a minimum, overhang the appliance cooking surface by 3 " on each side.
- Due to the high heat capability of these cooktops, particular attentio should be paid to the hood and duct work installation to assure it meets local building codes.
- For best smoke elimination, the lower edge of the hood should be installed 30 " -36 " above the appliance cooking surface.
- If the hood contains any combustible materials (i.e., a wood covering) it must be 36 " or greater distance above the cooking surface

Electrical and Gas Specifications
Be sure your appliance is properly installed and grounded by a qualified technician. Installation, electrical and gas connections, and grounding must comply with all applicable local codes.

Natural Gas or LP
Thermador Dual-Fuel Pro Grand Ranges are shipped by the factory to operate on natural gas. They must be converted for use with propane Verify that the type of gas being used at the installation site matches the type of gas used by the appliance. If the location / job site requires conversion from natural gas to propane (LP), utilize the included LP kit. Field conversion must be done by qualified service personnel only. Please refer to the LP Conversion Instructions for further information.

A manual gas shut-off valve must be installed external to the appliance, in a location accessible from the front, for the purpose of shutting off in a location accessible from the front, for the purpose of shutting of the unit.

## Natural Gas Requirements:

- Inlet Connection: $3 / 4$ " NPT external, $1 / 2^{\prime \prime}$ NPT interna (Minimum $3 / 4^{\text {" diam. flex line) }}$

Supply Pressure: 6" min. to 14" max. water colum ( 14.9 to 34.9 mb )

- Manifold Pressure: 5 " water column ( 12.5 mb )

Propane Gas Requirements:

- Inlet Connection: 3/4" NPT external, 1/2" NPT internal (Minimum $3 / 4$ " diam. flex line)
- Supply Pressure: 11 " min. to 14 " max. water column ( 27.4 mb to 34.9 mb )
- Manifold Pressure: 10" water column ( 24.9 mb )

High Altitude:
High altitude kits are available for Thermador Pro Harmony Ranges. Reference the Accessory chart or Contact Customer Support for details.

## PRO GRAND ${ }^{\circ}$ PLANNING INFORMATION

Professional Ranges

## Dual-Fuel:

Thermador Pro Grand Dual-Fuel Ranges are dual rated, designed to be connected to either $240 / 208 \mathrm{~V}$ AC, 60 Hz , 4-wire, single-phase power supply. The connection may be made with a range supply cord kit (purchased separately) or by hard-wiring to the power supply. A dedicated circuit breaker is required.

| PRG364WDG | 20 A |
| PRG366WG | 15 A |

Electrical Supply IMPORTANT: The cord supplied with gas ranges having an electric griddle requires a NEMA 5 -20 receptacle as shown here. Local codes my require a different wiring method.

WARNING: This appliance is equipped with a three-prong grounding plug for protection against shock hazard and should be plugged directly into a properly grounded receptacle. DO NOT cut or remove the grounding prong from this plug. DO NOT ALTER THIS PLUG.
Electrical and Gas Locations
Typical placement of the electrical and gas supply can be found within the "Cutout and Range Dimensions" located on the installation pages. Alternate placement within the supply zone is acceptable. Dual-Fuel ranges may be connected to the power supply with a range supply cord kit (sold separately) or by hard-wiring to the power supply. Allgas ranges may be connected to the power supply with the supplied range cord or by hard-wiring. It is the responsibility of the installer to and complete the electrical connection as dictated by local code and ordinances and/or the National Electric Code. The units must be and ordinances and/

Installation of the range must be planned so that the rough-in of Instalation of maximum clearance to the rear of the unit

## PLANNING INFORMATION

Professional Rangetops

Model Options
There are three sizes of Thermador Professional ${ }^{\circ}$ Rangetops to choose from - 30 -inch, 36 -inch and 48 -inch. Models are available with various rangetop configurations. Each model ships standard with an Island Trim Every model is LP convertible by ordering a conversion kit. Be sure to reference the correct model information in this design guide.
Installation Considerations
The information in this design guide provides key features, product dimensions, cutouts and installation specifications. Before installing a Thermador Professional Rangetop, be sure to verify the cutout dimensions and electrical / gas connections. Installation instructions are subject to change. Always consult with the installation manual included with the product for complete details prior to the installation

Installation Options
To ensure professional results, the cabinet and countertop openings should be prepared by a qualified cabinet worker. The rangetop projecting depending pn the countertop's front either flush or is designed to hang from the countertop by its side flanges. The countertop however, must be strong enough to support the rangetop. It may be necessary to add a supporting cleat along each side or a $2^{\prime \prime} \times 4$ " corner brace. Another alternative would be to construct a deck to set the rangetop on. Consult with the installation manual packed with the product for complete details before installing.

Above a Warming Drawer
Thermador Professional Rangetops may be installed above
Thermador Warming Drawer to create a convenient cooking center A minimum $23 / 4^{\prime \prime}(70 \mathrm{~mm}$ ) clearance is required between the bottom of the rangetop and the top of the warming drawer. Refer to the warming drawer section for additional specification.

Rear Clearance Requirements
30-Inch model PCG305W is suitable for 0" rear clearance to combustible surfaces.

All other models must meet these clearance

When using the included Island Trim, Thermador recommends minimum 6" ( 152 mm ) rear clearance to a combustible surface. Clearances of less than 6 " must be approved by the local codes and / or by the local authority having jurisdiction.

A rear clearance to a surface covered in a noncombustible materia is 0 " when using the included Island Trim

When installing against a combustible surface, a Thermador Low Backguard (purchased separately) is required for a 0 " rear clearance to the combustible surface

Electrical and Gas Specifications
Be sure your appliance is properly installed and grounded by a qualified technician. Installation, electrical and gas connections, and grounding must comply with all applicable local codes.

Thermador Professionale Rangetops are equipped with a 3 -wire plug and are designed to be connected to a $120 \mathrm{VAC}, 60 \mathrm{~Hz}$, single-phase power supply. A dedicated circuit breaker is required.

## Electrical Supply

The cord supplied with the gas ranges
having an electric griddle or grill require NEMA 5-20 receptacle. All other ga

Gas Requirements and Hookup
Rangetops are shipped by the factory to operate on natural gas. They Rangetops are shipped by the factory to operate on natural gas. The must be converted for use with propane. Verify that the type of gas appliance. If the location / iob site requires conversion from natural
ald gas to propane (LP), order an LP kit. Field conversion must be done by qualified service personnel only. Please refer to the LP Conversion Instructions for further information.

Natural Gas Requirements:

- Inlet Connection: $1 / 2$ " NPT internal (Minimum $3 / 4$ " dia. flex line)
- Supply Pressure: 6" min. to 14 " max. water column ( 14.9 to 34.9 mb ) - Manifold Pressure: $5^{\prime \prime}$ water column ( 12.5 mb )

## Propane Gas Requirements:

- Inlet Connection: $1 / 2^{\prime \prime}$ NPT internal (Minimum 3/4" dia. flex line)
- Supply Pressure: 11 " min. to 14 " max. water column ( 27.4 mb to 34.9 mb )
- Manifold Pressure: 10 " water column ( 24.9 mb )

A manual gas shut-off valve must be installed external to the appliance, in a location accessible from the front, for the purpose of shutting off the gas supply. The supply line must not interfere with the back of the unit.

## PLANNING INFORMATION

| From rear to centerline of gas inlet | $\begin{gathered} 2^{1 / 4^{\prime \prime}} \\ (54 \mathrm{~mm}) \end{gathered}$ |  |  |

Ventilation Requirements
We strongly recommend that a Thermador Professional Wall Hood, Island Hood or Custom Insert be installed with all Thermador Professional Rangetops. Due to the high heat capability of these units, particular attention should be paid to the hood and duct work installation to assure it meets local building codes.

Downdraft ventilation should not be used. Due to the high heat of the Rangetop burners, installing a microwave oven with a ventilation system over the rangetop is not recommended on anything other than the 30" 5-Burner. Refer to OTR manufacturer's installation manual for clearances.
The following table indicates the ventilation hood options for use with Thermador Professional Rangetops. Refer to the Ventilation Selection Guide in the Ventilation section or www.Thermador.com for a complete selection of ventilation options, blowers, and accessories

| Width | Configuration | Ventilation Options |
| :---: | :---: | :---: |
| $48{ }^{\prime \prime}$ | 6 Burners with Griddle and 6 Burners with Pro Grill | 48" or 54" Pro Wall Hood <br> 48" Chimney Wall Hood <br> 54" Island Hood <br> 48" or 54" Custom Insert |
| $36 "$ | 4 Burners with Griddle, <br> 4 Burners with Pro Grill and 6 Burners | 36 " or 42" Pro Wall Hood <br> 36" Chimney Wall Hood <br> $42^{\prime \prime}$ Island Hood <br> $36^{\prime \prime}$ or 42" Custom Insert |
| 301 | 5 Burners | 30" or 36" Pro Wall Hood <br> 30" or 36" Chimney Wall Hood <br> 30" or 36" Drawer Hood <br> $36^{\prime \prime}$ or 42 " Island Hood <br> 30 " or $36^{\prime \prime}$ Custom Insert |

Important Ventilation Notes:

- For wall installations, the hood width must, at a minimum, equa the width of the Rangetop. Where space permits, a hood larger in width than the Rangetop may be desirable for improved ventilation performance
For island installations, the hood width should overhang the width of
the Rangetop by a minimum of 3 " $(76 \mathrm{~mm}$ ) on each side.
For best smoke elimination, the lower edge of the hood should be installed 30 " 762 mm ) above the range cooking surface.

If the hood contains any combustible materials (i.e. a wood covering), t must be installed a minimum of 36 " ( 914 mm ) above the cooking surface
Due to the high volume of ventilation air, a source of outside
replacement air is recommended. This is particularly important for tightly sealed and insulated homes.

- A qualified heating and ventilating contractor should be consulted.

## INSTALLATION

Professional Rangetops

48 " Rangetop Side View

A: Cabinet face for installation B. With projecting control panel B: Cabinet face for installation C: Side flange

## INSTALLATION

Professional Rangetops

36-Inch Rangetop Cutout Dimensions

* Minimum recommended hood width equals that of the range or cooktop.

** 36 " minimum clearance from cooking surface ${ }_{* * *}{ }^{\text {to }}$ " combustible surfaces.
*** 5 " minimum clearance from cooking surface Note: Most hoods contain combustible components that must be considered when planning the
installation.

30-Inch Rangetop Cutout Dimensions
Minimum recommended hood width equals that of the range or cooktop.

* 36" minimum clearance from cooking surface to combustibbe surfaces.
** 5 " minimum clearance from cooking surface ** S" minimum clearance from cooking surface
to combustible side wall. Note: Most hoods contain combustible components
that must be considered when planning the that must be considered when planning the installation.

## INSTALLATION

Professional Rangetops

48-Inch and 36-Inch Rangetop Clearances

NOTE: A 36-inch minimum clearance is required between the top of the cooking surface and the bottom of clearance can be used when the bottom of the wood or metal cabinet
is protected by not less than $1 / 4$ inch of a flame retardant material covered with not less than No. 28 MSG sheet steel, 0.015 inch $(0.4 \mathrm{~mm})$ thick stainless steel, 0.024 inch $(0.6 \mathrm{~mm})$
aluminum, or 0.020 inch $(0.5 \mathrm{~mm})$ thick copper.

## PLANNING INFORMATION

Built-In Ovens

## Model Options

There are two Thermador Built-in Oven collections to choose fromProfessional and Masterpiece®. Each collection features a distinctive style Be sure to reference the correct model information in this design guide.

Installation Considerations
The information in this design guide provides key features, product dimensions, cutouts and installation specifications. Before installing a Thermador Oven, be sure to verify the cabinet dimensions and electrical connections. Installation instructions are subject to change. Always consult with the installation manual included with the product for complete details prior to the installation

## Important

When a Thermador Oven is installed at the end of a cabinet run, adjacent to a perpendicular wall or cabinet door, it is good practice to allow at least $1 / 4$ " $(6.4 \mathrm{~mm})$ space between the side of the oven and the wall or door

When installing a side hinge oven, leave a minimum 10" ( 254 mm ) clearance to allow the door to open.

| Minimum Cabinet Base Support Weights |  |
| :--- | :--- |
| Single Ovens | $232 \mathrm{lbs}(105 \mathrm{~kg})$ |
| Single Ovens with Steam and Convection | $232 \mathrm{lbs}(105 \mathrm{~kg})$ |
| Speed Ovens | $142 \mathrm{lbs} .(64.1 \mathrm{~kg})$ |
| Double Ovens | $429 \mathrm{lbs}(195 \mathrm{~kg})$ |
| Double Combination Ovens with Steam and <br> Convection Oven | $429 \mathrm{lbs} .(195 \mathrm{~kg})$ |
| Double Combination Oven with Microwave <br> or Speed Oven | 322 lbs. $(146 \mathrm{~kg})$ |
| Triple Combination Oven with Speed Oven <br> and Warming Drawer | $429 \mathrm{lbs} .(195 \mathrm{~kg})$ |

For oven support, install $2 \times 4$ 's extending front to back flush with the bottom and the side of the opening. The supporting base must be well secured to the floor / cabinet, flat / level and capable of supporting at least the weights listed floor/ cabinet, flat/
in the chart below.

Electrical Location and Specifications Refer to the appropriate installation diagram for details on onduit box location. Be sure your appliance is properly installed and grounded by a qualified technician. Installation, electrical connections and grounding must comply with all applicable local codes.

Allo are dual rated, designed to be connected to either $240 \mathrm{~V} / 208 \mathrm{~V} \mathrm{AC}, 60 \mathrm{~Hz}, 4$-wire, single phase power supply. Install a suitable conduit box (not furnished). An appropriately-sized, UL-listed conduit connector must be used to correctly attach the conduit to the junction box.

| Required Circuit Breaker 208 / 240V |  |
| :--- | :--- |
| Single Ovens | 30 Amp |
| Single Ovens with Steam and Convection | 20 Amp |
| Speed Ovens | 16 Amp |
| Double Ovens | 40 Amp |
| Double Combination Ovens with Steam <br> and Convection Oven | $40 / 50 \mathrm{Amp}$ |
| Double Combination Oven with Microwave <br> or Speed Oven | $40 / 50 \mathrm{Amp}$ |
| Triple Combination Oven with Speed Oven <br> and Warming Drawer | $40 / 50 \mathrm{Amp}$ |

## Important

Local Codes may vary; instalation, electrical connections and grounding must comply with all applicable local codes. If local codes permit grounding through the electrical supply neutra connect both the white neutral wire and the bare ground wire fom the oven to the white neutral electrical supply wire.

## PLANNING INFORMATION

## Built-In Microwaves

## Model Options

Several Thermador microwaves are available to meet a wide variety of installations. Choose a Thermador 24 -inch or 30 -inch Built-in MicroDrawer® Microwave which can be installed perfectly flush in any standard depth cabinetry. A Built-in Microwave with a drop-down doo is available with a Professional or Masterpiece® handle. A Built-Under Microwave Hood is also available for select installations. Be sure to reference the correct model information in this design guide.

Installation Considerations
The information in this design guide provides key features, product dimensions, cutouts and installation specifications. Before installing a Thermador Microwave oven, be sure to verify the cabinet dimensions and electrical connections. Instalation instructions are subject to hange. Alo ch product for complete details prior to the installation.

It is the responsibility of the owner and the installer to determine f additional requirements and/or standards apply to specific installations.

## Installation Options

Microdrawer" Microwave
The Thermador MicroDrawer® Microwave can be built into a cabinet or wall as a standalone unit or under a Thermador Built-in Oven.

Check to be sure that there is a clearance of 2 " or greater between the top of the MicroDrawer Microwave and the bottom of a built-in wall oven above it.

Built-In Microwaves With Drop-Down Door
Thermador Built-in Microwaves may be installed into a cabinet or wall as a standalone unit or above any Thermador Built-in Oven. They may also be installed above any Thermador Warming Drawer.

Side-by-Side Installation
Thermador Built-in Microwaves may be installed side-by-side in combination with a single wall oven. Accessory kit TWO3OYS may be by-side installation.

Electrical Specifications
These units require a 120 volt, $60 \mathrm{~Hz}, 15 \mathrm{AMP}$ (minimum) circuit. It is recommended that the unit be installed to a separate circuit that serves only this appliance.

These appliances are fitted with a 3 -prong grounded electrical plug. Do not modify the plug or use an adapter. If the plug does not fit with the available receptacle, have a licensed electrician install a properly grounded outlet before proceeding with the installation.

| Model |  |
| :--- | :---: |
|  | Required Circuit Breaker |
| MD30WS | $240 \mathrm{~V}, 60 \mathrm{~Hz}$ |
| MD24WS | 15 A |
| MB30WP | 15 A |
| MB30WS | 15 A |
| MU30WSU | 15 A |

Electrical Location-Microdrawer* Microwaves

Unit can also be installed using an electrical outlet in an adiacent cabinet within the area where the provided electrical cord can reach. Do not use an extension cord. 5" If the power supply cord is too (125 m short, have a qualified electrician
or seviceman install an outlet near the appliance.

Electrical Location-Built-In Microwaves with Drop-Down Door
Anywhere within the shaded area the minimal distance between the appliance and the wall is $13 / 4$ in $(45 \mathrm{~mm})$. The outlet can be located anywhere within the shaded area

## PLANNING INFORMATION

Warming \& Storage Drawers

## Model Options

Thermador 30-inch Warming Drawers are available in a push-to-open design with a stainless front or a Custom Panel design. These drawers pair beautifully with a Thermador speed oven or microwave. Thermador 30 -inch Storage Drawers are available in a standard or short design. The short design pairs perfectly with a Thermador steam and convection oven. Be sure to reference the correct model information in this design guide.
Installation Considerations
The information in this design guide provides key features, product dimensions, cutouts and installation specifications. Before installing a Thermador Warming Drawer or Storage Drawer, be sure to verify the cabinet dimensions and electrical connections (ff required). Instalation holuded with the product for complete details pior to the manual included with the product for complete details prior to the instalation

Electrical Specifications
Be sure your appliance is properly installed and grounded by a qualified technician. Installation, electrical connections and grounding must comply with all applicable local codes.

All Thermador Warming Drawers are designed to be connected to a 120 V AC, $60 \mathrm{~Hz}, 3$-wire, grounded outlet with a 15 A circuit breaker.

Electrical Location
The outlet can be installed in the back wall directly behind the drawer. A recessed power receptacle must not exceed $51 / 2 \mathrm{ft}$. (1.7 m) maximum distance from either side of the warming drawer cutout. Installation clearances permit for the excess power cord to be coiled behind the appliance.

Custom Front Panel
The Thermador Custom Panel Warming Drawer requires a custom front panel. You may build a custom drawer front panel to coordinate with your cabinetry. Custom panels must meet the following requirements:

- Have a handle
- Have the dimensions shown below
- Have a minimum thickness of $3 / 4$ " 19 mm )
- Have all edges finished
- If using wood, the back must be sealed to prevent moisture damage
- Be capable of withstanding a temperature of $158^{\circ} \mathrm{F}\left(70^{\circ} \mathrm{C}\right)$

## Installation Options

Wall-Mounted Installation
Thermador Warming Drawers may be installed below any Thermado Single or Double Built-in Oven. A minimum space of 1 " $(25.4 \mathrm{~mm})$ is recommended between the bottom of the oven and the top of the warming drawer
Under-Counter Installation
Thermador Warming Drawers may also be installed below any Thermador Electric or Non-professional Gas Cooktop as long as there is not contact between the bottom of the cooktop and the top of the warming drawer. When installing below a Thermador

Induction Cooktop, a minimum 1" ( 25.4 mm ) air gap must be maintained between the bottom of the cooktop and the top of the warming drawer. When installing below a Thermador Professiona Rangetop, a dawe

The cabinet base must be flat and capable of supporting weight of least 110 lbs . 50 kg ).

Side-by-Side Installation
Thermador Warming Drawers and Storage Drawers may be installed side-by-side in combination with a single wall oven. Accessory kit TWO3OYS may be required. See page 79 for details on approved combinations for side-by-side installation.

Prepare The Countertop
Some solid surface countertops require a special cutout size and special installation. For example, heat reflective tape or rounded corners may be necessary. Contact the countertop manufacturer
for instructions specific to your countertop.
Ventilation Requirements
\# We strongly recommend that a Thermador Ventilation Hood be installed with all Thermador Masterpiece® Gas Cooktops. The hood must be installed according to instructions furnished with the hood. Refer to the ventilation section or www. Thermador.com for complete selection of ventilation options, blowers, and accessories.
When installing the gas cooktop with a downdraft ventilation system, make sure that a minimum 27 square inch ( $174 \mathrm{~cm}^{2}$ ) opening e air inlet.

A cooktop sealing kit must also be purchased and installed. Refer to the downdraft ventilation section for more details.

Electrical and Gas Specifications
Be sure your appliance is properly installed and grounded by a qualified technician. Installation, electrical and gas connections, and grounding must comply with all applicable local codes. Thermador Masterpiece require a $60 \mathrm{~Hz}, 15 \mathrm{Amp}, 120 \mathrm{VAC}$ connection.

IMPORTANT: It is required that the cooktop be installed on a grounded, non-GFCI branch circuit.

Thermador Masterpiece ${ }^{\otimes}$ Gas Cooktops are shipped by the factory to operate on natural gas. They must be converted for use with propane operate on natural gas. They must be converted for use with propan type of gas used by the appliance. If the location / job site requires type of gas used by the appliance. If the location/ job site requires kit by referencing the model specification page in this guide. Field conversion must be done by qualified service personnel only. Please refer to the LP Conversion Instructions for further information.

Supply Pressure Requirements:
NATURAL GAS - 7 inches water column (14.9 Millibars) minimum. LP (PROPANE GAS) - 11 inches water column ( 27.4 Millibars) minimum. NOTE: The propane gas tank must be equipped with its own high pressure regulator in addition to the pressure regulator supplied with pressure

Electrical and Gas Locations
The opening for the gas connection and electrical cord is located at the right rear of rough-in box.

Plan the instalation so that the power connection is accessible from the front of the cabinet. Install a manual gas shut-off valve near the appliance. It must be easily accessible in an emergency.

## INSTALLATION

Gas Cooktops

30-Inch Cooktop and Cutout Dimensions

Side wall clearance dimensions can be reduced to 7" (178 mm) if opposing side wall is $\geq 24$ " $(610 \mathrm{~mm}$ )
** Dimension from countertop to top of grates
(max. 76 mm )
*** When installed in combination with a hood, refer to hood manufacturer's requirements for installation.
measurements in inches (mm)

## INSTALLATION

Gas Cooktops

30-Inch \& 36-Inch Gas Cooktop Cabinet Requirements

* Side wall clearance dimensions
can be reduced to 6" (152 mm) if
opposing side wall is $\geq 23$ " ( 584.2 mm )
NOTE: Dimension requirements are for combustible surfaces. When the surface is protected by a material listed by UL as a Floor Protector and Wall Shield covered with not less than No. 28 MSG sheet metal 0.015 inch ( 0.38 mm ) stainless steel, $0.024 \mathrm{inch}(0.6 \mathrm{~mm})$ aluminum or copper, it is considered noncombustible and some dimensions may be reduced. For a noncombustible surface over the cooktop, the minimum clearance is $24^{\prime \prime}(61 \mathrm{~cm})$ rather than 30 " $(76 \mathrm{~cm})$.

30-Inch \& 36-Inch Gas Cooktop Installation Above a Thermador Built-In Oven

When installing an oven or oven with a drawer in combination with a cooktop, a minimum distance between the cabinet floor and countertop (B) is required. Reference the table for dimensions. Refer to the oven installation guide for all other measurements.

## PLANNING INFORMATION

## Induction Cooktops

Model Options
Models are available in our heritage black finish as well as our Freedom ${ }^{\ominus}$ dark gray glass, Liberty"'ititanium gray glass and silver mirrored finish for those who want a bold, striking alternative that goes perfectly with stainless steel appliances. Be sure to reference
the correct model information in this design guide.
Installation Considerations
The information in this design guide provides key features, product dimensions, cutouts and installation specifications. Before installing a Thermador Induction Cooktop, be sure to verify the cutout dimensions and electrical connections. Installation instructions are subject to change. Always consult with the installation manual included with the product for complete details prior to the installation.

Thermador Masterpiece ${ }^{\oplus}$ Induction Cooktops may be installed above a Thermador Oven, as long as the minimum distance between the cabinet floor and countertop is maintained. Reference the installation pages in this guide for details on installing above a conventional ove steam oven, and microwave / speed oven

Thermador Induction Cooktops may also be installed above a Thermador Warming Drawer to create a convenient cooking center Refer to the warming drawer section for additional specifications.

## PLANNING INFORMATION

Ventilation

## Installation Consideration

Hood Width
The hood width should be no less than the width of the cooking surface. Where space is not restricted, a wider hood can be used to increase your capture area.

Distance from Cooking Surface
Proper mounting height is very important. If hood is mounted too low, it may be difficult to cook and be unsafe. If a hood is mounted too high, performance may be compromised. For optimal performance, the distance from the cooking surface to the bottom of the hood should be a minimum of 30 ", unless otherwise noted. Please refer to the installation manual for each hood and cooktop / range model for proper
hood mounting heights. hood mounting heights

Available Ceiling Height
The standard ceiling height can vary from region to region and in homes built in different eras. Ceiling heights, even in the same room, heights can vary between $77^{\prime} 6$ " (or 90 ") to over 10 ' (or 120 ")

Before selecting a Thermador Hood, check the available installation space and any extra space that may remain after proper installation of a hood and cooktop or range. This extra space can be filled using Thermador stainless steel duct cover accessories or integrated with kitchen cabinetry. The space can also be adjusted by raising or lowering your hood within the recommended range typically 30
to 36 " above the cooking surface).
Choosing the Correct Blower
A variety of interior and exterior blower options (Remote, Inline or Integrated) are available for Thermador Professional and Masterpiece Hoods. If the unit you have selected does not have a blower, one can be purchased separately. Blower selection will vary based on the volume of air that needs to be moved and the length and location of the duct run. For long duct runs with multiple turns and bends, consider using a more powerful blower. For the most efficient air flow exhaust, use a straight run or as few elbows as possible.

Remote Blowers VTR Series,
Depending on your preference and ducting situation, these blowers can be mounted on the roof or exterior wall of your home. An exterior installation may be more appealing to reduce noise in the kitchen.
Inline Blowers (VTI Series)
To minimize noise in the kitchen, these blowers are mounted along the duct line anywhere between the kitchen and the exterior wall. If you
have easy access to your duct line (in an attic, for example), this may have easy access to your duct line (in an attic, for example), this may be an appealing optio

Integrated Blowers (VTN series
These blowers are purchased separately and integrated into the hood or onto the downdraft unit at the time of installation. This option allows you to select your ideal hood with the exact power you require. Integrated blowers are included with HPWB3OFS, HPWB36FS and HPWB48FS.

SPECIAL NOTE: Always allow access to the blower for serviceability, should it be needed.

## Choosing the Right CFM

The power of the cooktop or range, measured in BTU, is perhaps the most important factor in determining CFM needs for a hood.

You should also consider the cooking space and cooking style of your client.

More demanding cooks usually require more exhaust capacity to handle moisture generated by boiling large pots of water or the grease and smoke resulting from grilling or frying. This cooking style could require a hood or downdratt system with aifflow of 600 to 1,300 CFM.
For those who are used to preparing quick meals in a relatively small kitchen, a hood with 600 CFM may be adequate ventilation for the cooking space.

If the cooking surface is in a peninsula or island, a larger capacity hood can provide better capture when there are cross currents and when the hood needs to be mounted higher. Downdraft ventilation systems are also a good alternative.
High heat cooking or aromatic foods may require additional CFM. Increasing capture area by 3 " on each side is also a recommended way to address this issue.

Length and Size of Duct Work
Do not use flexible duct, it creates back pressure / air turbulence and reduces performance.

Straight runs and gradual turns are best. Use the shortest route with the fewest turns possible.

Proper performance is dependent upon proper ducting. Use a qualified and trained installer. Local building codes may require the use of makeup air systems when using ducted ventilation systems greater than specified CFM of air movement. The specified CFM varies from locale to locale. Consult your HVAC professional for specific requirements in your area.

If using a 10" duct, Thermador recommends not exceeding 50 feet of duct. Transitions, elbows and wall or roof caps are all factors that will add more static pressure, therefore increasing your equivalent duct run.

blowers, and ducting with 10 " round duct connections.

CVDUCT2
Rectangular 2 ff long $\times 17 /$ in deep $\times 19$ in wide duct. CVDUCT2 transition required to directly connect CVDUCT2 to sides or rear of downdraft housing. Can be used as an
extension to exhaust through a cabinet or wall, and can be cut to modify length. For use
with installation of inline or with installation of inline or
remote blower apolications remote blower applications
with CVTSIDE6, CVTSIDE8, and CVTSIDE10.

## PLANNING INFORMATION

Wall Hoods

## Model Options

When selecting a ventilation system, choose from one of our two sophisticated appliance collections. Select from the Professional Collection for the ultimate in cooking and venting power or the Masterpiece ${ }^{\oplus}$ Collection for its sleek styling and numerous convenience functions. Thermador Wall Hoods are available in various depths and heights to fit your kitchen plans and are meticulously crafted for both function and design. Be sure to reference the correct model information in this design guide.

Electrical Specifications
Be sure your Thermador Wall Hood is properly installed and grounded by a qualified technician. Installation, electrical connections and grounding must comply with all applicable local codes.

Install a suitable conduit box (not furnished). An appropriately-sized, ULlisted conduit connector must be used to correctly attach the conduit to the junction box. Remote blowers require a 5 -wire installation.

Installation Considerations
The information in this design guide provides key features, product dimensions, cutouts and instalation specifications. Before instaling a Thermador Wall Hood, be sure to verify the cutout dimensions and electrical connections. Installation instructions are subject to change. Always consult with the installation manual included with the product for complete details prior to the installation.

## Installation Options

Thermador Wall Hoods may be installed above a Thermador Range or Cooktop to create a convenient cooking center. Refer to the ventilation selection guide for compatibility.
Hood installation height above a range or cooktop can vary. To obtain the necessary installation height above a Thermador Range or Cooktop consult the appliance's instalation manual. Accessory 6 " and / or 12

Thermador Wall Hoods can be mounted on a wall or suspended from Thermador Wall Hoods can be mounted on a wall or suspended from a cabinet. The cabinet must be structurally joined to the wall studs to

## PLANNING INFORMATION

Chimney Wall Hoods

## Model Options

Thermador Chimney Wall Hoods feature sleek styling and numerous convenience functions. Chimney Wall Hoods are available in 30 -inch, 36 -inch and 48 -inch widths and are adjustable to suit a range of ceiling heights. All stainless steel or stainless steel with glass designs are available. Be sure to reference the correct model information in this design guide.
Electrical Specifications
Be sure your Thermador Chimney Wall Hood is properly installed and grounded by a qualified technician. Installation, electrical connections and grounding must comply with all applicable local codes.

If possible, site the earthed socket directly behind the chimney paneling. The grounded socket should be connected via its own circuit If the grounded socket is no longer accessible following installation of the hood, ensure that there is a permanently installed disconnector.

## Installation Considerations

The information in this design guide provides key features, product dimensions, cutouts and installation specifications. Before installing a Thermador Chimney Wall Hood, be sure to verify the cutout dimensions and electrical connections. Installation instructions are subject to change. Always consult with the installation manual included with the product for complete details prior to the installation.
Installation Options
Thermador Chimney Wall Hoods may be installed above a Thermador Range or Cooktop to create a convenient cooking center. Refer to the ventilation selection guide for compatibility.

Hood installation height above a range or cooktop can vary. To obtain the necessary installation height above a Thermador Range or Cooktop, consult the appliance's installation manual. An accessory Hood Extensin can be used to fill the space between the hood and ceiling.

Thermador Wall Hoods can be mounted on a wall or suspended from a cabinet. The cabinet must be structurally joined to the wall studs to support the weight of this hood.

## PLANNING CHECKLIST

## Freedom" Collection

This custom product requires attention to the finest details. Did you remember to ...?
$\square$ Choose a desired configuration - side-by-side or stand alone columns (See pages 182-189 for details)
$\square$ Plan the cutout height(s) - 84" (See pages 194-197 for details)
$\square$ Plan the cutout width(s) - depends on configuration and column width (See pages 194-197 for details)
$\square$ Plan the cutout depth -25 " for North American style cabinets, 24 with installation frame accessory, 24 " for European style cabinets (See pages 196-199 for details)
$\square$ Ensure the cutout interior (top and sides) is flush to the appliance at a depth of min. 4", preferably 6 " from face frame (See pages 196-199 for details)
$\square$ Ensure the cutout interior returns (top and sides) are finished to match exterior at a depth of min. 4 ", preferably 6 " from face fram (See pages 196-199 for details)
$\square$ Ensure proper clearance for appliance doors including handle(s) - check for interference with other appliances, open or closed cabinets and doors, nearby walls (See page 201 for details)
$\square$ Properly site the electrical outlet and (if applicable) water box (See pages 194-195 for details)
$\square$ Ensure the reverse of any custom panel is finished to match the exterio
$\square$ Choose the handle style - Professional, Masterpiece ${ }^{\oplus}$ or custom
$\square$ Choose the correct handle length. Typically, all columns would use a 36 " handle. The 30 " handle must be used on the 30 " bottom freezer drawer
$\square$ Choose the toekick style - stainless (included with appliance) or design custom toekick(s) (See page 200 for details)
$\square$ Procure the proper installation accessories - stainless steel frame kit (FRAMEKIT10) for framed installations in 24-inch deep cutouts heater kit (HEATRKIT20) for installations where two appliances are installed side-by-side or instances where any appliances are eterkit eas that are suject to humidity or locted next to atside wall. (See page 190 for details)

Freezer Columns, Bottom Freezers and Pre-assembled Bottom Freezers

## COMMON CONFIGURATIONS

Freedom Collection

The Thermador ${ }^{\circledR}$ Freedom ${ }^{\circledR}$ Collection uses independent columns that create unlimited flexibility in both function and design. Some suggested pairings are listed below. A special kit is included with all freezer columns to simplify traditional side-by--side refrigerator / freezer combinations. When combining two appliances where one is not a freezer column orf any two unis installed less than 6 ( 152 apart from one another but not connected side-by-side, always use the Heater Kit (HEATRKIT20) to guard against damaging condensation build-up.

## COMMON CONFIGURATIONS

Freedom Collection

You don't need to remodel your kitchen to enjoy complete personalization. The specially-designed 23.5 " refrigerator unit features the same interior capacity as a 24 " column, but has been crafted to seamlessly pair with any 18 " and 24 " freezer. Together, they will perfectly fit into predetermined 42 " or 48 " spaces - without the need to adjust existing cabinetry

42-Inch (41.5-Inch Predetermined Spaces / Replacement Installation)

48-Inch (47.5-Inch Predetermined Spaces / Replacement Installation)

Installation Accessories

Freedom" Frame Ki
Included with all pre-assembled bottom freezers, this adjustable frame is also available as an optional accessory for use with any custom column for installation in 24 -inch ( $(610 \mathrm{~mm}$ ) deep cutouts. The kit includes two identical and reversible metal side trims whose placement between the interior cutout wall and the appliance helps overcome the challenge of unfinished cabinet returns.
Freedom' Heater Kit
HEATRKIT20-13W @ 120V
When two appliances are installed side-by-side a sealing kit must be used. For combinations that involve a freezer column, this kit is included. For all other (non-traditional, i.e. two wine columns, two bottom freezers, etc.) side-by-side combinations or instances where any appliances are installed less than 6 -inches ( 152 mm ) apart from one another but not midity or locited next to an outide wall

## PLANNING INFORMATION

## Freedom Collection

## Installation Considerations

The appliance should be installed in a dry, ventilated room. It may no be installed outdoors. The ambient temperature of the room must be between $55^{\circ} \mathrm{F}\left(13^{\circ} \mathrm{C}\right)$ and $100^{\circ} \mathrm{F}\left(43^{\circ} \mathrm{C}\right)$

The appliance should not be exposed to constant direct sunlight or excessive heat. If installation next to a heat source, such as an oven, radiator, etc. is unavoidable, observe the following minimum distances from the heat source

- $11 / 4^{" 1}(30 \mathrm{~mm})$ from an electric cooking appliance,
- 11 13/16" ( 300 mm ) from an oil or solid-fuel cooking appliance

Installation and Cutout Dimensions
Please see pages 194-197 for complete cutout planning information.
It is important to observe the specified dimensions of the installation cutout for a trouble-free installation of the appliance and for the subsequent appearance of the door panel.

- In particular ensure that the cutout is square. Squareness can
be checked by suitable means, e.g. spirit level, diagonal measurements, etc.
-The side walls of the cutout must be flush. The minimum thickness of
the side and top walls is $5 / 8$ " $(16 \mathrm{~mm})$. The minimum thickness
of toekick panel is $1 / 4^{4}(6 \mathrm{~mm})$.
Furriture / Fixtures
During installation, the appliance is fastened to adjacent and overhead furniture / fixtures and it is therefore essential that all such furniture / fixtures are well secured to the substructure or adjacent wall.

Flooring / Substructure
On account of the heavy weight of a fully loaded appliance, a load bearing substructure is required. To ensure correct installation and function, the support must be flat, level and made of hard, rigid material. If in doubt, contact an architect or a building expert.

Refer to the following table for load-bearing capacity:

| Appliance | Load Bearing Capacity |
| :---: | :---: |
| 23.5-Inch Fresh Food Column | 945 lbs. / 429 kg |
| 24-Inch Fresh Food Column | 949 lbs. / 431 kg |
| 30-Inch Fresh Food Column | 1,097 lbs. / 498 kg |
| 36-Inch Fresh Food Column | $1,363 \mathrm{lbs} . / 618 \mathrm{~kg}$ |
| 18-Inch Freezer Column | 774 lbs. / $351 \mathrm{kg*}$ |
| 24-Inch Freezer Column | $958 \mathrm{lbs} . / 435 \mathrm{~kg} *$ |
| 30-Inch Freezer Column | 1,116 lbs. / 507 kg |
| 36-Inch Freezer Column | $1,353 \mathrm{lbs} . / 614 \mathrm{~kg}$ |
| 18-Inch Wine Preservation Column | 840 lbs / $/ 381 \mathrm{~kg}$ |
| 24-Inch Wine Preservation Column | $1,067 \mathrm{lbs} . / 484 \mathrm{~kg}$ |
| 30-Inch Bottom Freezer, 2-Door | $1,135 \mathrm{lbs} . / 515 \mathrm{kg**}$ |
| 36-Inch Bottom Freezer, 2-Door | $1,399 \mathrm{lbs} . / 635 \mathrm{kg**}$ |
| 36-Inch Bottom Freezer, French Door | $1,382 \mathrm{lbs} . / 627 \mathrm{kg**}$ |
| *Without water dispenser *Pre-assembled |  |

## INSTALLATION OPTIONS

Freedom Collection

The Freedom ${ }^{\oplus}$ Collection offers a variety of installation possibilities** In some instances, special accessories are required.
Recommended Installations
Stand-
Alone

All Freedom appliances must be completely enclosed on the top and sides If one side of the appliance is visible, a decorative sile panel must be used.
The side panel must be connected firmly to the wall, the floor and any overhead furniture / fixtures before the appliance is placed in the cutout

## Concerns

tis absolutely essential to ensure that the appliance is installed in such a way that the doors do not interfere with an adjacent wall or other kitche elements. (See page 201 for details on door swivel range dimensions)
partition - minimum $5 / 8^{\prime \prime}(16 \mathrm{~mm})$-is required to ensure the doors do not interfere with one another when opened. Use a partition to separate appliances and observe the door swivel range. (See page 201 for details on door swivel range dimensions)

A Thermador French Door Bottom Freezer cannot be connected side-by-side with any other appliance. Use a partition to separate appliances and observe the door swivel range. (See page 201 for details on door swivel range dimensions)

## DOOR PANEL DIMENSIONS

Freedom Collection

Each Freedom ${ }^{\oplus}$ Collection refrigeration appliance is designed to be equipped wa decorative door panel. A panel can be custom-made or purchased as a stainless steel accessory. The table below illustrates the dimensions of the stainless steel panel accessories and can be used as a guide in creating custom panels. At $797 / 8^{\prime \prime}(2029 \mathrm{~mm})$ tall, they are designed for a toekick height of 4 " $(102 \mathrm{~mm})$, and a total cutout height of $84^{\prime \prime}$ ( 2134 mm ) yielding $1 / 8^{" ~}(3 \mathrm{~mm})$ reveals. At ${ }^{3 / 4 " ~}(19 \mathrm{~mm})$ deep, they are designed to attach to the $24^{\prime \prime}(610 \mathrm{~mm})$ deep appliance for an overall depth of $243 / 4$ " 629 mm$)$ See page 194 for cutout planning.

When using custom panels, always ensure that the panel reverse is finished to match the exterior, as parts of the panel reverse will be visible when the refrigerator door is opened

IMPORTANT: While these sketches can serve as a general guide in planning panel dimensions, the correct panel dimensions are dictated by design choices including style and dimensions of surrounding kitchen cabinetry, case and toekick height, etc. Please ensure careful planning based on the specific kitchen design.

French Door Bottom Freezer
*ncluding ice maker
The receptacle must be installed by a licensed electrician only.
For the installation position of the receptacle refer to diagram in "Electrical Location".

Grounding Instruction
This appliance must be grounded. In the event of a malfunction or breakdown, grounding will reduce the risk of electric shock by providing a path of least resistance for the electric current.

Additional Grounding Procedure
Some local regulations may require a separate ground. In such cases, the required accessory ground wire, clamp and screw must be purchased separately. Never ground the appliance to plastic plumbing lines, gas lines or water pipes.
A 4-conductor cord shall be used when the appliance is installed in an area where local codes do not permit grounding through the neutral. Power supply cord must be replaced by a licensed electrician only.

Warning
Improper connection of the equipment grounding conductor may result in electric shock. Have the appliance checked by a qualified electrician or service technician if you are in doubt as to whether the appliance has been properly grounded.

Electrical Location
Connect the appliance to an outlet that is near the appliance. The outlet must be freely accessible following installation of the appliance.

## PLANNING INFORMATION

Freedom Collection

Water Location
A cold water connection is required for appliances that feature an ice maker or an ice and water dispenser.

The water pressure must be between 40 and 120 p.s.i. (2.75-8.25 bar) The installation must comply with local plumbing regulations.

A separate shut-off valve must be installed for the appliance water connection.

The shut-off valve for the water connection may not be behind the appliance. It is recommended to place the shut-off valve outside the cutout next to the appliance or in another easily accessible location. When installing the water connection, observe the permitted installation areas for the water supply line. The supply line can be located to the ight (a), to the left (b), or underneath (c).

## CABINETRY PLANNING INFORMATION

Freedom Collection

## Cabinetry Terms \& Basic Requirements

To clarify the terms that are used in this design guide, please refer to the following definitions:

This is the main body of a kitchen cabinet.
(Cabinet) Face Frame
This is a decorative frame at the front of a kitchen cabinet representing the space between cabinetry doors or drawers and
is typical for North America. European style cabinets (frameless cabinetry) typically do not have a face frame.
Door Panel
Able to be fully flush integrated when installed in 25 " ( 635 mm ) deep cabinets, Freedom ${ }^{\oplus}$ Collection refrigerators are intentionally designed to be equipped with custom door panels that perfectly matc surrounding kitchen cabinetry. Typical panel thickness is $3 / /^{\prime \prime}(19 \mathrm{~mm})$ However, hicker panels can be accommodated to emlare the look o he visle face. frame (as overlay) or mach exissing panel reverse is finished to match the exterior as pats of the pane reverse will be visible when the refigerator door is opend

Kitchen Cabinetry Illustration

Cutout (Niche)
The cutout is the cavity in which a Freedom ${ }^{\circ}$ Collection appliance is installed. The width of the cutout ( 18 -inch, 23.5 -inct, 24 -inch, 30 -inch or 36 -inch) is dependent on the appliance(s). The total depth of the cutout is equal to the depth of the case plus face frame. It does not necessarily include the thickness of the door panel. For proper planning of cutout depth, please refer to pages 196-199.

Typically, the cutout for a Freedom ${ }^{\bullet}$ Collection appliance will be $25^{\prime \prime}$ 635 mm ) deep. When planning the cutout, it is essential that the top and side interior walls be flush to the appliance at a minimum depth material for secure installation. Also, Cecause the (16 minterior will be partially visible when the refrigerator door is opened, always ensure that the top and side returns are finished to match the exterior furniture at the same minimum depth of 4 " $(102 \mathrm{~mm})$.

## CABINETRY PLANNING INFORMATION

Freedom Collection

## Cabinetry Style \& Cutout Depth

Freedom ${ }^{\circ}$ Collection refrigeration appliances are designed to accommodate nearly any type of kitchen cabinetry door installation. Generally, when using standard $34^{\prime \prime}$ ( 19 mm ) panels, 25 " $(635 \mathrm{~mm})$ deep cutouts are recommended but the required cutout depth depends on the desired cabinetry and custom panel execution, whether typical North American styles that employ a face frame-requiring a depth of $25^{\prime \prime}(635 \mathrm{~mm})$-or European style—requiring a depth of 24 " ( 610 mm )

The below cabinetry styles detail requirements for the cutout and custom panel.
4) Standard Partial) Overlay-25" (635 Mm) Cutout Depth

With standard overlay kitchen cabinetry the face frame is an importan design element. In order to emulate this aesthetic for the refrigerator, one must account for the door panel thickness typicially $3 /^{4 \prime}(19 \mathrm{~mm})$ as well as the face frame thickness here, also $3 / 4^{4}(19 \mathrm{~mm})$. The resultin $(19 \mathrm{~mm})=11 / 2^{\prime \prime}(38 \mathrm{~mm}$ ) The cum tive thickess of the door panel requires added denth in the cut so 25 " 6635 mm ) is recommended (see sketch).
B) Full Overlay-25" (635 Mm) Cutout Depth

The requirements for standard overlays are also valid for full overlay designs so $25^{\prime \prime}(635 \mathrm{~mm})$ cutout depth is recommended. However especially if kitchen cabinet doors are thinner than $3 / 4$ " $(19 \mathrm{~mm})$ or reveals are $1 / 8$ " $(3 \mathrm{~mm})$ or smaller, a 24 " $(610 \mathrm{~mm}$ ) cutout depth may also be acceptable. In this execution both the cabinet door and the small reveal of the fully overlaid face frame must be emulated within the typical appliance door panel thickness of $3 / 4^{4}(19 \mathrm{~mm})$. This can be mall reveals sy simply ignoring the visible area of the face frame (vey on the custom door panel to emulate a small visible face frame (see sketch).

C © D) Offset \& Flush Inset - 25" (635 Mm Cutout Depth
Here, kitchen cabinetry door panels do not rest atop the cabinet face frame (overlay), but are instead inserted partially (offset) or fully flush (inset) into the face frame. Such offset or flush inset door panels require additional depth in the cutout. Using the example of a ${ }^{3 / 4 / 4}$ " 19 mm ) thick panel, the complete cutout depth would be $24^{\prime \prime}(610 \mathrm{~mm})+$ $3 / 4^{\prime \prime}(19 \mathrm{~mm})=243 / 4^{\prime \prime}(629 \mathrm{~mm})$ and in this example $25^{\prime \prime}(635 \mathrm{~mm})$ is recommended.
E) Framed - 24 " $(610$ Mm) Cutout Depth

For Freedom ${ }^{\circledR}$ Collection refrigeration appliances, a metal frame (FRAMEKIT10) may be affixed to the side of the cabinet which conveniently hides unfinished case returns and provides a classic built-in look. This is particularly relevant for existing cabinetry that has not been custom-buit to accom rodat these appl aces. A 2 ( 610 m ) cutor
F) European Style Kitchen Cabinetry - 24" 610 Mm) Cutout Depth

If the kich If the kitchen design is based on European style cabinetry, there is no eed of the kitche cabinetr design. Therfore $24 "(610 \mathrm{~mm}$ ) deep cutout with accompanying custom panel will always be sufficient.

A) Standard Overlay Design

B) Full Overlay Design

## Important

It is strongly recommended the top interior of the cutout be of solid material ( $5 / 8^{\prime \prime}(16 \mathrm{~mm})$ thickness). Ensure that the top well is completely flush for a depth of at least 4" ( 102 mm )

Ensure that the side walls of the cutout are also completely flush to a depth of at least 4" (102 mm )

If, for some reason, a separate cutout cabinet is created, ensure that the furniture return is at least 4" ( 102 mm ) deep for proper installation

## CABINETRY PLANNING INFORMATION

Freedom Collection

Planning Example \#1: Frameless (European) Cabinetry

Planning Example \#2: Standard Overlay Cabinetry

Cutout For 42 " Side-By-Side Appliance Combination, Standard Overlay Cabinetry:
In this example, the installation cutout is formed by creating a separate cutout around the appliances. It yields a look that deviates from the general kitchen design.

The custom door panel has a cumulative thickness of $1 \frac{1}{2} \mathbf{2 月}^{\prime \prime}(38 \mathrm{~mm}), 3 / 44^{\prime \prime}(19 \mathrm{~mm})$ emulating the face frame and $3 / 4^{\prime \prime}(19 \mathrm{~mm})$ for the actual door panel). Thus, a $25^{\prime \prime}(635 \mathrm{~mm})$ deep installation cutout is required.

- cutout width is exactly 42 " (for an 18 " +24 " $=42$ " side-by-side combination)
- cutout (case) depth is $25^{\prime \prime}$ ( 635 mm ) due to $1^{1 / 22^{\prime \prime}}(38 \mathrm{~mm})$ custom door panel
- any furriture return must be at least 4 " $(102 \mathrm{~mm})$ deep, on interior top and sides, of solid material and should be finished to match the exterior at the same depth ( 4 " or 102 mm )

## INSTALLATION

Freedom Collection

Toekick \& Venting Grille
Each Freedom ${ }^{\oplus}$ Collection refrigeration appliance comes with a 4" ( 102 mm ) tall stainless steel toekick. A custom-made toekick that matches the surrounding cabinetry may be applied instead. While standard toekick height is 4" (102 mm ), depending on the usage of the leveling legs, the toekick height could vary. Regardless of toekick height, it is imperative that the venting grille remain unblocked to ensure proper functionality of the appliance, Decorative toekicks should be removable to allow for servicing.

Typical 4" (102 mm) toekick height. Velcro adhesive strips are used to fasten the toekick to the appliance. Venting grille and (if applicable) the water filter cavity are located above the toekick area.

Upper Molding
The planning of decorative upper molding above the cutout requires taking into account the actual or desired height of the door panel.

The overall height of the door panel will depend on:

- the height of the appliance, typically 84 " ( 2134 mm ) — leveling legs allow heigh adjustment ranging from $-1 / 2^{\prime \prime}(-13 \mathrm{~mm})$ to $+13 / 8^{\prime \prime}(+35 \mathrm{~mm})$
- the installed height of the door panel (distance from the bottom edge of the door panel to the floor, typically 4" ( 102 mm ), and, if desired, any extension of the custom panel above the appliance cutout)
- the appliance type (single door or bottom freezer)

## Important

Please recall that a panel should be installed at a minimum height
of 4" (102 mm ) from the floor to allow proper ventilation of the appliance,
Always ensure that the top of the cutout or upper decorative molding is at least Always ensure that the top of the cutout or upper decorative molding is at least
$4^{"}(102 \mathrm{~mm})$ deep, so that the refrigerator can be properly secured to the cutout wall. This is particularly important if a protruding cutout is specially created and configured with a face frame. Furniture returns for any face frame must be a minimum of 4" ( 102 mm ) deep.

If required by the surrounding cabinetry design, the distance between the bottom edge of the door panel and the floor can be increased from approx. $4^{" ~(~} 102 \mathrm{~mm}$ ) up to $71 / 8^{\text {" }}$ ( 181 $\mathrm{mm})$, but should not be decreased, Note, however, that the venting grille and (if applicable) water filter cavity will be visible, even if the door is closed.

Vertical Section, Side View:

## INSTALLATION

Freedom" Collection

## Door Swivel Range

It is absolutely essential to ensure that the appliance is installed in such a way that the doors (including handles) and adjacent cabinets, countertops, pilasters, walls or other kitchen elements do not interfere with one another when opened. The illustrations below depict the swivel range of the Freedom ${ }^{\oplus}$ Collection refrigerator doors including mounted door panels of both $3 / 4^{" ~}(19 \mathrm{~mm})$ and $11 / 2^{\prime \prime}(38 \mathrm{~mm})$ thickness. In the event of doo interference the following solutions may be employed:

- Limit the refrigerator door opening angle to $90^{\circ}$ with a door stop pin inserted into the hinge.
- Reduce the door panel thickness (if larger than $3 / 4$ " $(19 \mathrm{~mm})$ ).
- Install a spacer between the appliance and the kitchen element that creates the interference.
- Rearrange the opposing kitchen element that creates the problem.
- Create a protruding cutout for the appliance.

## PLANNING INFORMATION

Under-Counter Refrigeration

## Model Options

The Under-counter Freedom ${ }^{\circledR}$ Refrigeration Collection includes a glass door refrigerator, a glass door wine reserve, a double refrigerator drawer unit and a double refrigerator / freezer drawer unit. Glass door models are available in right-hinged and left-hinged options. All units install fully flush to be seamlessly integrated into 24" depth cabinetry. Each unit is available custom-panel ready or in stainless steel with a Masterpiece ${ }^{\oplus}$ or Professional Handle to complement the entire collection of Thermado appliances.

Installation Considerations
Location
The appliance should be installed in a dry, ventilated room. It may not be installed outdoors. The ambient temperature of the room should stay between $55^{\circ} \mathrm{F}\left(13^{\circ} \mathrm{C}\right)$ and $110^{\circ} \mathrm{F}\left(43^{\circ} \mathrm{C}\right)$

The appliance should not be exposed to excessive heat. If installation next to a heat source, such as an oven, radiator, etc. is unavoidable, observe the following minimum distances from the heat source:

- $1^{\text {" }}(25 \mathrm{~mm})$ from another refrigerator or wine reserve,
- $11 / 4^{" 1}(30 \mathrm{~mm})$ from an electric cooking appliance,
- 11 13/16" ( 300 mm ) from an oil or solid-fuel cooking appliance

Ensure that the exterior air vent is not blocked by cabinetry or other elements.

## Electrical Specification

The appliance comes with a 3 -wire power supply cord (NEMA 5-15p), UL-listed in the USA and requires a 3 -wire receptacle that is fitted with a 15 - or 20-Amp fuse.

Grounding Instruction
This appliance must be grounded. In the event of a malfunction or breakdown, grounding will reduce the risk of electric shock by providing a path of least resistance for the electric current.
Additional Grounding Procedure
Some local regulations may require a separate ground. In such cases, the required accessory ground wire, clamp and screw must be purchased separately. Never ground the appliance to plastic plumbing lines, gas lines or water pipes.

A 4-conductor cord shall be used when the appliance is installed in an area where local codes do not permit grounding through the neutral. Power supply cord must be replaced by a licensed electrician only.

## Warning

Improper connection of the equipment grounding conductor may result in electric shock. Have the appliance checked by a qualified electrician or service technician if you are in doubt as to whether the appliance has been properly grounded.

Electrical Location
The receptacle must be near the appliance: 61 " $(1550 \mathrm{~mm})$ to the right of the appliance or $37^{\prime \prime}(940 \mathrm{~mm})$ to the left of the appliance, and also freely accessible following installation of the appliance for future service.

Water Supply
Units with an icemaker require a connection to a water supply. The pressure of the water supply coming out of a reverse osmosis system going to the water inlet valve of the refrigerator needs to be between system is connected to your cold water supply the water pressure to the reverse osmosis system needs to be a minimum of 40 to 60 psi (276 to 414 kPa ). Refer to the Instalation Guide for details if the water pressure is less.

## PLANNING INFORMATION

Dishwashers

## Model Options

All collections are available with a Masterpiece ${ }^{\oplus}$ or Professional Handle to perfectly match other Thermador appliances in your kitchen, or a custom panel option to fully integrate with your cabinetry. Be sure to reference the correct model information in this design guide.

Installation Options
Thermador custom panel dishwashers can be installed fully flushed for a seamless, integrated look.

Fully integrated models allow you to have a custom door panel made to match your cabinetry. The custom door can be a two-piece configuration to look like a drawer at the top and a cabinet door at the bottom or like a single full-length door. A template is included with the fully integrated models to explain the mounting procedure.

NOTE: These dishwashers can accept custom door panel weights ranging from 7 to 24 lbs.; however, the dishwasher comes from the factory ready for custom panel door weights from 11 to 18 lbs . If you plan on using a door panel that is not 11 to 18 lbs., please contact customer service at (800) 944-2904

Installation Considerations
The information in this design guide provides key features, product dimensions, cutouts and installation specifications. Before installing a Thermador Dishwasher, be sure to verify the cabinet dimensions, electrical connections and water connections. Instalation instructions are subject to change. Always con

Thermador Dishwashers are designed to be enclosed on the top and both sides by standard residential kitchen cabinetry.

If the dishwasher is to be installed in a corner, make sure that there is adequate clearance to open the door

Hot Water Supply
The hot water heater should be set to deliver approximately $120^{\circ} \mathrm{F}$ $\left(49^{\circ} \mathrm{C}\right.$ ) water to the dishwasher. Water that is too hot can cause some detergents to lose effectiveness. Lower water temperatures will increase un times. The hot water supply pressure must be between 15-145 psi (1-10 bar).

All Thermador Dishwashers are ENERGY STAR ${ }^{\ominus}$ Certified

Electrical Specification.
This appliance must be grounded to a metal, permanent wiring system, or an equipment grounding conductor must be run with the circuit conductors and connected to the equipment grounding terminal or lead on the dishwasher.

| Model | Required Circuit Breaker |
| :--- | :--- |

All Dishwasher Models

> Required Circuit Breaker

Water and Electrical Locations
For proper dishwasher operation and appearance, ensure that the enclosure is square and has the dimensions shown in the cutout drawings on the following page. Select a location as close to the sink as possible for easy access to water supply and drain lines.
Make required openings to allow for passage of the water, drain and electrical line. In order to avoid interference with the dishwasher when sliding it into the cabinet, the holes should be cut within the $7 \times 2.5^{\prime \prime}$ area shown

NOTE: Plumbing installations will vary - refer to local codes. The

Whether you're enhancing your closet or completing your wet bar, bring Thermador into every space in the house to add a touch of luxury

## 

## PLANNING INFORMATION

Built-In Coffee Machine, Professional \& Masterpiece

## Model Options

The Thermador Built-in Coffee Machine is available in two options for use in a plumbed or non-plumbed installation. Both models feature a stainless steel finish and design that coordinates with both the Professional and Masterpiece ${ }^{\oplus}$ collection. An optional trim kit is available for $30^{\prime \prime}$ cutout installations.

Installation Considerations
The information in this design guide provides key features, product dimensions, cutouts and installation specifications. Before installing a Thermador Built-in Coffee Machine, be sure to verify the cabinet dimensions and water / electrical connections. Instalation instructions are subject to change. Always consult with the installation manual

Installation Options
Plumbed
With a new option for built-in drainage instead of a water tank,
Thermador plumbed Buil-in Coffee Machines help ensure your machine is ready to operate. A water and drain connection eliminate the need to empty a drip tray, while water replenishment flows water directly into the machine from a plumbed water source, eliminating the need to fill a water container.

## Non-Plumbed

Thermador non-plumbed Built-in Coffee Machines can be installed without an additional water line in the home-enabling installation in bedroom, guest room, office and beyond.

## Important

Make sure there is adequate ventilation. To do this, remove the rea panel or cut out an opening of $1911 / 16^{\prime \prime} \times 153 / 4 \mathrm{4}(500 \times 400 \mathrm{~mm})$. There must be a gap of at least $13 / 8^{\prime \prime}(35 \mathrm{~mm})$ between the wall and base of the unit or the rear panel of the unit situated above.

The ventilation slots and intake openings must not be covered.
Also follow the installation instructions for the appliance situated above or below.

The ideal installation height for the fully automatic espresso machine, measured from the floor to the lower edge of the appliance, is $371 / 2^{\prime \prime}$ to 57 " $(95-145 \mathrm{~cm})$.

If installing the appliance above a warming drawer, the height of the recess must be $23^{1 / 4} 4^{\prime \prime}(590 \mathrm{~mm})$. If the appliance is installed directly under a décor panel, ensure that there is a ventilation slot of at least 31 square inches ( 200 cm 2 ). The ideal installation height for the fully of thematic coffee machine, measured from the floor to the lower edge of the appliance, is $377 / 16^{\prime \prime}(950 \mathrm{~mm})$.

Electrical Specification.
Be sure your appliance is properly installed and grounded by a qualified technician. Installation, electrical connections and grounding must comply with all applicable local codes

Thermador Built-in Coffee Machines are equipped with a 39-inch, 3-wire supply cord with a NEMA 5-15R plug. It is designed to be connected to a $120 \mathrm{VAC}, 60 \mathrm{~Hz}$, single phase power supply

| Model | Required Circuit Breaker |
| :--- | :---: |
