🔥 **Summer Warning: Don't Let Lint Build Up! Clean Your Dryer Vent & Lint Trap** 🔧

Did you know **dryer fires peak in the summer**? A clogged dryer vent doesn't just slow things down—it's a major **fire risk**.

Keep your home safe and your appliance running efficiently with these simple steps:

✅ **Clean the lint trap after every load**

✅ **Have your dryer vent professionally cleaned every 6–12 months**

✅ **Watch for warning signs**:

- Clothes taking longer to dry
- Dryer feels hotter than normal
- Burning smell during a cycle
- Visible lint around the vent or outdoor exhaust

While **we don't offer dryer vent cleaning**, we strongly recommend having it done regularly—especially during the hot summer months when the risk is higher.

🛠️ A little maintenance goes a long way toward preventing damage and keeping your home safe!
